5.2 The Blockwork

The masonry external walls have been laid in a recess set down 100 mm to the slab perimeter (see figure 16). Clean out blocks are used at

These features are:-

- (i) the use of a recess at the outer edge of the floor slab
- (ii) the use of clean out blocks to all vertically reinforced cores
- and (iii) the provision of a hand beam to the eaves below the sill to
